Software engineer with 3+ years at Microsoft on Azure Local. Primary developer of the app customers use to bring new machines online; also works on the device services, tests, and telemetry. Builds and uses AI agent tooling daily.

EXPERIENCE

Microsoft | Mountain View, CA

Software Engineer II, Azure Local

Dec 2025 - Present

Software Engineer

Apr 2023 - Dec 2025

- Primary developer of the Configurator App for Azure Local, the Windows app used to bring a new machine online and register it with Azure Arc. Wrote 289 of the repo's 498 merged PRs (58%); shipped through public preview.
- Migrated the app from Electron and React to .NET MAUI Blazor Hybrid (.NET 10), with 700+ xUnit and bUnit tests.
- Built the app's Playwright end-to-end suite: 38 tests drive the real app over the Chrome DevTools Protocol against a device VM deployed fresh for each run, in four Windows and Linux lanes that gate PRs.
- Implemented Microsoft Entra device code sign-in for Azure Arc registration end to end: the app's front end, the device service, and the PowerShell command line, including the reset flow and expired-code handling.
- Made failed provisioning diagnosable: config-driven support log collection on Linux, a standalone collector for when device services are down, and log hand-off from the maintenance OS to the installed OS.
- Stood up release telemetry for small form factor deployments: an Azure Data Explorer cluster, KQL functions, and Power BI dashboards for CI reliability and the provisioning funnel, built for leadership operational reviews.
- 645 PRs merged across 13 repos since 2023 and 160+ teammates' PRs reviewed. Moved daily work onto AI coding agents in 2026, every change still human-reviewed: 272 PRs merged in nine months versus 138 in all of 2025.

Microsoft | Software Engineer Intern | Mountain View, CA

Jun 2022 - Sep 2022

- Built automatic discovery and configuration of peer devices on a customer network (UDP multicast, HTTP), a cryptographic scheme to secure device-to-device communication, and the web UI to provision them.

LibreTexts | Site Reliability Engineer, part-time | Davis, CA

Dec 2020 - Apr 2023

- Operated a Kubernetes cluster running JupyterHub and BinderHub for teachers and students, with self-hosted DNS, DHCP, and TFTP and bare-metal nodes bootstrapped over IPMI.
- Led a full-stack web interface for researchers to run GPU jobs, including AlphaFold protein predictions, and added interactive components to an open-source plugin for live Jupyter kernels with thousands of daily users.

PROJECTS

Copilot Bridge | github.com/TimStewartJ/copilot-bridge | TypeScript, React, Express, SQLite

Mar 2026 - Present

- Open-source (MIT) local workspace for AI coding agents on the GitHub Copilot SDK: task-scoped sessions, a markdown knowledge base, cron schedules, browser automation, and Azure DevOps, GitHub, and Linear integrations.
- Deploys changes to itself through staging preview, validation, and rollback. 1,350+ commits; in daily use.

SKILLS

Languages: C#, TypeScript, JavaScript, PowerShell, Python, KQL, SQL, C++

Frameworks and testing: .NET, .NET MAUI, Blazor, React, Node.js, Express, REST APIs, Playwright, xUnit, bUnit

Platforms: Azure Arc, Azure Data Explorer (Kusto), Power BI, Azure DevOps, Linux, Hyper-V, Kubernetes, Docker

AI tooling: GitHub Copilot SDK and CLI, Model Context Protocol (MCP), agent tool and skill design

EDUCATION

University of California, Davis | B.S. Computer Science, GPA 3.9

Sep 2020 - Mar 2023
